

Safety Cans

Safety cans are used for handling flammable liquids in quantities of five gallons (19 L) or less. They have pouring outlets equipped with tight-fitting caps or valves, normally closed by spring action, except when held open by hand. This prevents spillage if the can is tipped over or exposed to fire.

All safety cans have a flame arrester at the outlet and fill connections. Such screens prevent external fire from igniting vapors in the can while liquid is being poured.
