FM Air Filtration System

The Justrite Filtration System actively removes harmful vapors from your FM-approved safety cabinet, improving indoor air quality and protecting your team. Unlike passive venting, it requires no ducting and installs in minutes — no tools, no fuss.

FM Air Filtration System

Why is air filtration essential for chemical safety?

Even when closed, safety cabinets can release harmful vapors from stored chemicals. The Justrite air filtration system removes those VOCs, protecting your team's health, improving indoor air quality, and helping you stay compliant, without the need for expensive ducting or building modifications.

- **Air ventilation** inside and outside the cabinet ensure a clean and healthy workplace.
- **Eliminates** harmful vapor buildup at the source.
- **Energy-efficient** system recirculates air indoors, preserving climate-controlled air.
- Equipped with Justrite **Safe-T-Vent™** thermally actuated dampers, which melt at 74°C (165°F)
- The **installation is easy** and fast with no need for ducting or expensive building modifications.
- **Ensures compliance** with ATEX approval and CE certification.

Features and Benefits

Air Filtration System for FM Cabinets, safe storage of flammable liquids and hazardous substances.

Compatible with 170, 225 and 340 liters FM safety cabinets.

- Ventilates from the bottom of the cabinet to eliminate risk from the source.
- Built-in sensors monitor VOC levels and alert when filters need replacing.
- Adjustable flow for different size cabinets.
